

Mohammed Rimshan K K

MERN Stack Developer

Kochi, Kerala | rimshanshanu55@gmail.com | +91 8606760567 | Portfolio | linkedin | github | Leetcode

About Me

As a self-taught MERN stack developer from Kochi, I specialize in full-stack development, focusing on creating scalable, efficient, and secure server-side applications. My passion for distributed systems and learning new technologies drives my commitment to delivering high-quality solutions.

Education

BROTOTYPE, MERN Full Stack Development

July 2024 – September 2025

IDEAL COLLEGE FOR ADVANCED STUDIES ,KADAKASSERY MALAPPURAM -

Jun 2021 – April 2024

University of Calicut , in Computer Application

- GPA: 7.1/10

Technologies

Programming Languages :HTML5, CSS, JavaScript (ES6+), TypeScript, DSA, C, Java, Python

Libraries/Frameworks: .Node.js, Express.js, React.js, Redux, Redux Toolkit, TanStack Query, Socket.io, WebRTC, Push Notification, Bootstrap, Tailwind, Django

Databases :MongoDB, MySQL

Tools & Technologies : .JWT, Firebase, OAuth2.0, Git, Nodemailer, Multer, Stripe, Razorpay, AWS, Nginx

Architecture & Principles :RESTful APIs, MVC Architecture, SOLID Principles, Clean Architecture

Other Skills :PowerPoint, Word, Communication Skills, Leadership, Presentation Skills, Project Management

Experience

Professional Development Program , Packapeer Academy

July 2024 – September 2025

- Worked as a MERN Stack Developer, building and maintaining scalable web applications. Developed RESTful APIs using Node.js and Express, and designed responsive user interfaces with React. Collaborated with team members to implement new features, fix bugs, and improve application performance. Applied clean architecture principles and ensured code quality through reviews and testing.

QA Associate and MERN Stack Developer , Packapeer Academy

November 2025 – April 2026

- Engaged in a comprehensive self-learning program featuring hands-on projects, personalized mentorship from industry experts, weekly performance reviews, and real-world applications, fostering innovative problem-solving, technical proficiency, and a commit.

Projects

StriveX – SaaS based Fitness Platform

GitHub Link - Present

- Developed a full-stack AI-powered fitness and e-learning platform with dedicated modules for Admin, Trainers, and Users.
- Integrated a chatbot using the GEMINI API for seamless user assistance and query resolution.
- Enabled real-time chat between trainers and users using Socket.IO, enhancing communication and engagement.
- Implemented live workout and consultation sessions using WebRTC for one-on-one video interactions.
- Designed and deployed personalized AI-based workout and diet plans using GEMINI API.
- Built a robust admin dashboard for managing users, trainers, workouts, categories, and system analytics.
- Developed a notification system to keep users updated with push alerts, session reminders, and important

updates.

- Integrated subscription and payment modules with earnings tracking for trainers and history for users.
- Implemented community features like forums, fitness challenges, and leaderboards to boost user engagement.
- Tools Used: Typescript, React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Socket.IO, WebRTC, GEMINI API, Clean Architecture, SOLID Principles

EduSphere - E-Learning Platform

FrontEnd | BackEnd

- Developed a full-stack e-learning platform with distinct modules for Admin, Tutors, and Students, enabling smooth role-based access and management.
- Integrated a chatbot using the GEMINI API to provide real-time user assistance and enhance the learning experience.
- Enabled real-time communication between tutors and students through Socket.IO for interactive live chat functionality.
- Implemented an admin dashboard to efficiently manage users, courses, notifications, and tutor-student activity.
- Designed and deployed push notification functionality to keep users informed with real-time alerts and updates.
- Tools Used: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Socket.IO, GEMINI API

Mini Projects

AI Image Generator

FrontEnd | BackEnd

- Developed an AI-based web application using the MERN stack, allowing users to generate unique images based on text prompts via OpenAI's API and Hugging Face model integration.
- Designed an intuitive frontend with React.js and Tailwind CSS to ensure a seamless and user-friendly experience.
- Integrated real-time image generation functionality, providing users with instant results.
- Utilized Cloudinary for efficient image upload and storage, ensuring optimal performance.
- Tools Used: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, OpenAI API, Hugging Face Model, Cloudinary

URL Shortener with QR Code

FrontEnd | BackEnd

- Developed a full-stack e-learning platform with distinct modules for Admin, Tutors, and Students, enabling smooth role-based access and management.
- Developed a URL shortening service using the MERN stack, featuring QR code generation for easy sharing and access.
- Implemented RESTful APIs to manage shortened URLs, with options for setting expiration dates.
- Integrated a QR code generation library to dynamically create QR codes for each shortened URL.
- Designed a responsive and minimalistic user interface using React.js and Bootstrap for a seamless user experience.
- Tools Used: React.js, Node.js, Express.js, MongoDB, Bootstrap, QR Code Generation Library

USER MANAGEMENT SYSTEM

GitHub Link

- Built a full-stack web application with role-based access and distinct interfaces for Admin and Users using the MERN stack.
- Implemented robust JWT-based authentication and managed global state using Redux Toolkit for secure and seamless user interaction.
- Developed admin functionalities to manage user profiles, including options to add, update, and delete users efficiently.
- Crafted a responsive and clean frontend using React.js, Bootstrap, and custom CSS to enhance the overall user experience.
- Structured the project with a scalable repository architecture and implemented TypeScript across the codebase for improved maintainability and type safety.
- Tools Used: React.js, Node.js, Express.js, MongoDB, Redux Toolkit, Bootstrap, CSS, TypeScript
